

# National University of Computer and Emerging Sciences, Lahore Campus

	Course Name:	Compiler Construction	Course Code:	
	Program:	BS (CS)	Semester:	Fall 2021
	Duration:	One hour	Total Marks:	30
	Paper Date:	20-Oct-2021	Weight:	
	Section:	7A	Page(s):	3
	Exam Type:	Mid-1		

Student : Name: Mustafa Roll No. 18L-0926

Instruction/Notes: Solve all questions on this question paper. Do not attach any additional sheets.

## Question 1 (5+5 marks)

a) Match the entries in the first column with the corresponding description in the second:

a) Lexical analyzer	i. Convert words into sentences (b)
b) Parser	ii. Type checking (c)
c) Semantic analyzer	iii. Translator (d) (5)
d) Intermediate code generator	iv. Execute program (e)
e) Interpreter	v. Identify words (a)

β) Fill in the blanks, using the following words: compiler, interpreter or hybrid system.

- i. Compiler provides the fastest execution
- ii. Interpreter does not hide source code
- iii. Hybrid System provides platform independence while protecting source code
- iv. Compiler is not good for debugging
- v. Hybrid system uses both a compiler and an interpreter

Question 2 (5+5 marks)

- a) Give regular definition for a time string. Following are two examples: "09:10:40 am", and "11:05:09 pm" should be valid; invalid strings should not be generated.
- b) Give a DFA for the odd-even language i.e. odd no of a's and even no of b's.

(a)

Time  $\rightarrow$  H:M:M F

H  $\rightarrow$  0H<sub>a</sub> | 1H<sub>b</sub>

H<sub>a</sub>  $\rightarrow$  1|2|3|4|5|6|7|8|9

H<sub>b</sub>  $\rightarrow$  0|1|2

M<sub>a</sub>  $\rightarrow$  M<sub>a</sub> M<sub>b</sub>

M<sub>a</sub>  $\rightarrow$  H<sub>b</sub> | 3|4|5

M<sub>b</sub>  $\rightarrow$  0 | H<sub>a</sub>

F  $\rightarrow$  am/pm

Complex

(b)

even a's even b's

even a's odd b's

odd a's odd b's

Question 3 (5+5 marks)

Mustafa 18L-0926

Give a left-recursive CFG for C++ structures. Assume only two data types: int and char; do not worry about arrays or pointers. You may use the id token (no need to define it).

b) Remove left recursion from the following grammar:  $S \rightarrow S ( S ) \mid \#$

(a)

$$S \rightarrow \text{struct id } \{ X \};$$

$$X \rightarrow Y \text{ DT id}; \mid \epsilon$$

$$Y \rightarrow Y \text{ DT id}; \mid \epsilon$$

$$\text{DT} \rightarrow \text{int} \mid \text{char}$$

(b)

$$S \rightarrow S ( S ) \mid \#$$

Removing left recursion

$$S \rightarrow S' X$$

$$S' \rightarrow ( S ) S' \mid \#$$
