3	Digital Storytelling	6
4	Mastering multimedia: Photos and videos	8
5	Jump start to Google Docs	9
6	Sequencing and Logic	11

Chapter 1: Learning about the Operating System

Answer the following questions.

a. What is the difference between hardware and software?

Hardware	Software
Hardware refers to the physical parts of a computer that you can touch and feel.	Software refers to a set of programs that perform tasks.
Example: CPU, Monitor, Mouse	Example: MS Windows, MS Office, Adobe Flash

b. How does an operating system help the computer work?

Operating system helps a computer in managing hardware and software resources. A computer cannot function without an operating system.

c. Describe the properties of a desktop on a computer.

After the Windows welcome message appears, you will see a screen with small images. This screen is referred to as the Desktop.

d. Why is it important to have different files and folders?

To store and organize data in computer, we need files and folders. Without files and folders, we cannot store our data.

e. Outline the steps required to change the position of a taskbar.

Step 1: Move your mouse pointer to an empty space on the taskbar.

Step 2: Click and hold the mouse button.

Step 3: Drag the mouse pointer to the right of the computer screen.

Step 4: Release the mouse button.

f. Why are the Start Menu and the Taskbar important when using a computer?

The **Start Menu** and the **Taskbar** are important parts of a computer because they help users open programs, find files, and control computer settings easily.

Chapter 2: Setting up the Computer

Answer the following questions.

a. What do you understand by screen time?

The amount of time we spent using computer is called screen time.

b. Reflect on your screen time and write ways to reduce it.

I use computer for 2 hours daily. We can reduce screen time by playing physical games like cricket, football.

c. Describe a time when you used a touchscreen to learn something new. What did you learn, and how did the touchscreen help?

I used touch screen to play quiz game during last evening. I learn new math problems and touchscreen helped me in giving proper hints.

d. What is Widget?

A small box on a computer screen that delivers changing information is known as widget.

Chapter 3: Digital Storytelling

Answer the following questions.

a. Define digital storytelling.

Digital storytelling is a great way to learn new skills and have fun at the same time. It helps you think critically, solve problems and use technology.

b. Reflect on how digital storytelling is a useful tool to communicate.

Digital storytelling is a useful tool to deliver information in a visual way. It improves creativity and learning process.

c. What are the steps involved in the process of digital storytelling?

The following are the steps involved in creating digital story.

1. Brainstorming
2. Creating a storyboard
3. Gathering the media
4. Putting it all together

d. What do you understand by the word Multimedia? Give some examples.

Multimedia means using different types of content together, like text, pictures, sounds, videos, and animations, to share information or make learning fun.

e. Write the steps to share a story made on Google Slides.

After creating the story on Google Slides:

Step 1: Open the Google Slides main screen where story is created

Step 2: Click on the *Share* button on top right corner

f. How does creating a digital story differ from writing a traditional story on paper?

Digital Story	Traditional Story
Digital Story includes multimedia.	Traditional Story is read from a book or notebook.
Digital Story can be easily shared and edited anytime.	Traditional Story is written once on page and hard to change.

Chapter 4: Mastering Multimedia: Photos And Videos

Answer the following questions.

a. What are Pixels?

Pixels are the small areas on the screen that make up an image. The more pixels there are in an image, the sharper and the image will be.

b. How are grids used on a phone while taking pictures?

Grids can be used while taking pictures in camera setting of your phone.

c. What is metadata?

Metadata contains information about a file and can includes details such as the camera used, exposure settings, date, and location.

d. How metadata can be used?

To find metadata of pictures saved on your phone, follow these steps:

Step 1: Open the default gallery app.

Step 2: Tap on the photo to open it.

Step 3: Look for details option

Step 4: Tap on it to view the metadata of image.

e. What is Resolution?

The power of a computer screen to give a clear image, depending on the size of the pixels that make the image is called resolution.

f. What is Megapixel?

A million pixels, used to measure the quality of a digital screen or image is called megapixel.

Chapter 5: Jump Start to Google Docs

Answer the following questions.

a. Explain how to create a table in Google Docs.

We can create a table by using the following steps:

Step 1: Click on the place where you want to insert the table

Step 2: Click on *Insert* menu and select *Table*

Step 3: Drag the mouse over the grids to choose the number of rows and columns

Step 4: Release the mouse to create the table

b. How can you share a document with someone else in Google Docs?

We can share the document using the following steps:

Step 1: Open the document in Google Docs

Step 2: Click on top right *Share* button

c. Define Header.

Header is used to insert text at the top of document which may contain details like the company name, page number, and author name.

d. Define Footer.

Footer is used to insert text at the bottom of document which may contain details like the company name, page number, and author name.

e. What is the purpose of Headers and Footers in a document?

Headers and footers are used to insert text at the top and bottom of the document which may contain details like the company name, page number, and author name.

f. Highlight the steps to insert an image in the Google Docs.

To insert an image in the Google Docs, follow the steps:

Step 1: Click on the place where you want to insert the image

Step 2: Under *Insert* tab, click *Image*

Step 3: Click on the image you want to insert

g. Define the Text Wrapping options in Google Docs.

Text Wrapping in Google Docs controls how text moves around an image. Here are the different text wrapping options:

1. In Line
2. Wrap Text
3. Break Text

Chapter 6: Sequencing and Logic

Answer the following questions.

a. What is sequencing?

The specific order in which instructions are performed in an algorithm. For example, you can't go to school without first getting dressed and packing your bag.

b. Why is sequencing important when giving instructions to a computer?

Sequencing is important when giving instructions to a computer because if the instructions are in the wrong order, the computer won't be able to do the task.

c. Give a brief description of the main parts of the Blockly interface.

Main parts of the Blockly interface are:

1. Workspace
2. Toolbox
3. Blocks
4. Trashcan and Zoom Controls

d. What is a Loop?

Loops are used to repeat actions. For example, instead of writing a command to move a character left 100 times, we can use loops.

e. How Loop is useful?

Loop saves a lot of time from writing code for same action again and again.

f. What is Algorithm?

A set of rules that must be followed when solving a particular problem.

g. Define Debugging.

Finding and removing the errors in a computer program is called debugging.
