

COMSATS University Islamabad, Lahore Campus

Course Title:	Information Security			Course Code:	CSC432	Credit Hours:	3(3,0)
Resource Person:	Dr. Muhammad Sharjeel			Programme Name:	BSSE		
Semester:	6 th , 8 th	Batch:	FA21, FA22	Section:	A, B	Due Date:	04-03-2025

Assignment – 1

[CLO-1 – Discuss the fundamental concepts, policies, standards and ethical issues of information security – Understanding]

Submit printed copy of the solution on or before your next lecture.

Provide answers to the following;

1. Find the IP addresses of www.google.com, facebook.com, and cuilahore.edu.pk.
 - a. How do you do it?
 - b. Can you locate where these servers (computers) are?
2. Modify your PC's hosts file to map www.google.com to Facebook's IP address and try to do a google search. What happens? Remove the modification to the host file and repeat.
3. Find the domain name of 111.68.103.178 (reverse the address and add .in-addr.arpa). Why you added .in-addr.arpa to the reverse address, what is its purpose?
4. Can you find the owner of cuilahore.edu.pk, chatgpt.com, netflix.com, and espncriinfo.com domains? How can this information be helpful to an attacker?
5. Find the complete route from your PC to www.deepseek.com.
6. Find the MAC address of your PC. What command did you use?
7. Print your PC's ARP cache table. Can you change any entry in the table? What will happen if you modify your PC's ARP table?
8. Print the routing table on your PC and explain each line (first 10 lines, if too many).
9. Find the location of 111.68.103.27
10. Run 'netstat -abon' on your PC. What information does it displays? What is the name of the process listening on port 3389? What is the status of port 3389? Why it is important for an attacker?
11. Run 'netsh wlan show profile' on your PC? What information does it show? Can you recognize all the user profiles?
12. Run 'query user' on the command line and interpret what it displays?
